

" Whether in individual or nation, it is not one's thinking that determines his pattern of reaction, but one's pattern of reaction that determines his thinking."

From "The Neurosis of Man" p 81

Trigant Burrow

" For Hegel the thought process, which he transforms into an independent subject under the name idea, is the creator of the real, which forms only its external manifestation. With me, on the contrary, the ideal is nothing else than the material transformed and translated in the human brain."

Karl Marx

The diagram illustrates the relationship between various sets of elements. The overlapping regions represent the intersection of these sets, while the non-overlapping regions represent the unique elements of each set. The diagram is a complex geometric representation of set theory.

The diagram shows the intersection of several sets, with the central region representing the common elements of all sets. The surrounding regions represent the unique elements of each set. The diagram is a complex geometric representation of set theory.
